For Sale: Certified Demo Units

Cat Simulators has a limited number of certified demo units for sale at a discounted price. These simulators are in excellent condition and were used for a limited number of hours. For example, a Hydraulic Excavator demoed at a trade show. To find out which simulator models are available, please call your Account Manager at 1.309.266.2640 or e-mail connect@catsimulators.com.

Avoid Unplanned Maintenance on your M-Series Motor Grader with Cat Simulators Training

When you're busy running a construction job or a mine operation, the last thing you need is one of your motor graders in the shop because an operator misused it. Unplanned maintenance can be avoided with proper training. Cat Simulators

M-Series Motor Grader system allows operators to learn and make mistakes, or break bad habits, in the safety of the virtual environment. No need to take a Grader out of production for training; Cat Simulators features the same controls found in the actual Grader. Doug Bohnker, Installation and Training Instructor, shares his favorite tips to avoid unplanned maintenance. [Read More](#)

See a narrated [video demo](#) of the M-Series Motor Grader System hardware and software then visit www.catsimulators.com/NewSimulatorSystems to see all the latest models along with training exercise samples and more. [Contact us](#) with questions or for a quote!

Simulation Training Trends

Cat Simulators is constantly watching trends in technology and training. Our new accessory, the motion platform, addresses the use of kinesthesia (the ability to feel movements with the limbs and body) during training.

While you can train operators with audio and visual cues, the addition of the motion platform allows users to feel vibration and movement, from forward/backward and left and right tilt as well as up and down movement, when the simulated machine is running during training exercises. [Watch](#) what it can do, then [contact us](#) to find out about the science that went into creating Cat Simulators motion platform and which models it fits.
